CC: DPS DIRECTOR BUDREAU
FROM: BATTALION CHIEF ANDY MOFFITT
RE: ANNUAL FIRE HYDRANT TESTING

The City of Chanute Fire Department will start annual fire hydrant testing on May 11, 2009 and continue this testing until August 31, 2009.

All fire hydrants in and around the city will be tested to ensure that they are functional in case of an emergency.

During this time, citizens might find that their tap water has a brown color to it. It is recommended that citizens that experience this brown water run their tap for at least one minute to clear the water of the sediment. This sediment is caused by the amount of debris that is already in the line and is stirred up by the departments testing.

We also recommend that citizens check their water before starting any laundry. This line sediment will stain and most likely ruin white clothing.

If citizens have any questions, please call the Chanute Fire Department at 431-5236.
